Pre-Calculus**Unit 9 (Chapter 11): Limits****11.3 More on Limits**

Target 9A: Evaluate a limit of a function algebraically

Target 9D: Calculate one-sided limits and two-sided limits

Review of Prior Concepts

$$1. \lim_{x \rightarrow \infty} \left(\frac{x^2-4}{x+2} \right) = \infty$$

*bt deg N > deg D,
∴ ∞*

$$2. \lim_{x \rightarrow -\infty} \left(\frac{x^2-4}{x+2} \right) = -\infty$$

*deg N > deg D,
∴ ∞ or -∞
 $\frac{(\infty)^2-4}{-\infty+2} = \frac{+\infty}{-\infty}$
neg. #*

$$3. \lim_{x \rightarrow 2} \left(\frac{x^2-4}{x+2} \right) = \lim_{x \rightarrow 2} \frac{(x-2)(x+2)}{x+2}$$

$$= \lim_{x \rightarrow 2} (x-2) = 0$$

*factor + reduce
check in graph calc*

More Practice**Limits at Infinity**<https://www.mathsisfun.com/calculus/limits-infinity.html><https://www.khanacademy.org/math/ap-calculus-ab/infinite-limits-ab/limits-at-infinity-ab/v/limits-and-infinity><http://www.shmoop.com/precalculus-limits/limits-infinity.html><https://youtu.be/wBYr-58mc5E><https://youtu.be/75xO9xy7TTQ><https://youtu.be/FVJNuukADeQ>**3 Methods for Evaluating Limits**

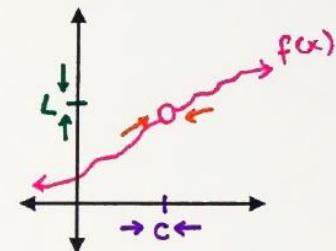

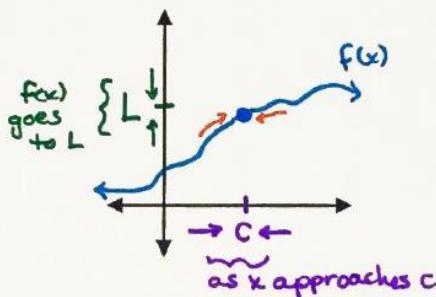

① Numerically - use table of values

② Analytically - use algebra

③ Graphically - use graphs

What does $\lim_{x \rightarrow c} f(x) = L$ mean?

As x approaches c (from either side), then $f(x)$ becomes close to L .

Evaluate Limits Analytically/Algebraically

- Replace the value of c for x (if possible)

Examples:

1. Find $\lim_{x \rightarrow 2} (x^3 - 2x)$

$$= 2^3 - 2(2)$$

$$= 8 - 4$$

$$= 4$$

$$\lim_{x \rightarrow 2} (x^3 - 2x) = [4]$$

3. Find $\lim_{x \rightarrow a} (x^3 + 4x)$

$$= a^3 + 4a$$

$$\lim_{x \rightarrow a} (x^3 + 4x) = [a^3 + 4a]$$

2. Find $\lim_{x \rightarrow 1} 4x$

$$= 4(1)$$

$$= 4$$

$$\lim_{x \rightarrow 1} 4x = [4]$$

4. Find $\lim_{x \rightarrow -1} \frac{x^2 - 1}{x - 1}$

$$= \frac{(-1)^2 - 1}{-1 - 1}$$

$$= \frac{1 - 1}{-2}$$

$$= \frac{0}{-2} = [0]$$

5. Find $\lim_{x \rightarrow 1} \frac{x^2 - 1}{x - 1} = \frac{1^2 - 1}{1 - 1} = \frac{0}{0} \therefore \dots \text{do some algebra}$

$$= \lim_{x \rightarrow 1} \frac{(x-1)(x+1)}{x-1}$$

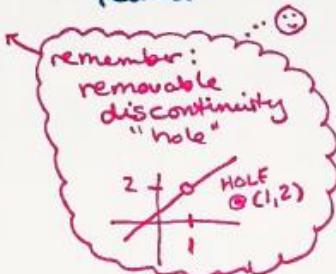

factor & reduce

$$= \lim_{x \rightarrow 1} (x+1)$$

$$= 1+1$$

$$= 2$$

$$\lim_{x \rightarrow 1} \frac{x^2 - 1}{x - 1} = [2]$$

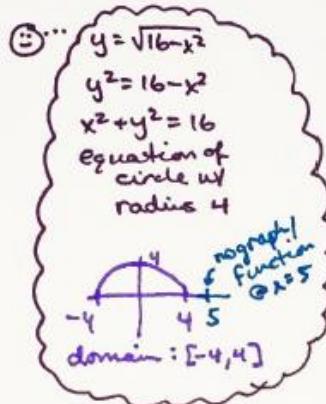

7. Find $\lim_{x \rightarrow 5} \sqrt{16 - x^2}$

$$= \sqrt{16 - (5)^2}$$

$$= \sqrt{16 - 25}$$

$$= \sqrt{-9}$$

DNE

6. Find $\lim_{x \rightarrow 3} \frac{x^2 + 2x - 15}{x^2 - 9} = \frac{3^2 + 2(3) - 15}{3^2 - 9} = \frac{0}{0} \therefore$

$$= \lim_{x \rightarrow 3} \frac{(x+5)(x-3)}{(x+3)(x-3)}$$

$$= \lim_{x \rightarrow 3} \frac{(x+5)}{(x+3)}$$

$$= \frac{3+5}{3+3}$$

$$= \frac{8}{6}$$

$$= \frac{4}{3}$$

8. Find $\lim_{x \rightarrow 1} \frac{\sqrt{x+3} - 2}{x-1} = \frac{\sqrt{1+3} - 2}{1-1} = \frac{0}{0} \therefore$

$$= \lim_{x \rightarrow 1} \frac{\sqrt{x+3} - 2}{x-1} \cdot \frac{\sqrt{x+3} + 2}{\sqrt{x+3} + 2}$$

$$= \lim_{x \rightarrow 1} \frac{x+3 - 4}{(x-1)(\sqrt{x+3} + 2)}$$

$$= \lim_{x \rightarrow 1} \frac{x-1}{(x-1)(\sqrt{x+3} + 2)}$$

$$= \lim_{x \rightarrow 1} \frac{1}{\sqrt{x+3} + 2}$$

$$= \frac{1}{\sqrt{1+3} + 2} \cdot \frac{1}{\sqrt{4} + 2} = \frac{1}{2+2} = \frac{1}{4}$$

multiply by conjugate
 $\sqrt{a+b} \rightarrow \sqrt{a-b}$

$x-1$ reduces

Find: a) $\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$

b) $\lim_{x \rightarrow 0} \frac{\sin 2x}{2x} = 1$

c) $\lim_{x \rightarrow 0} \frac{\sin 10x}{10x} = 1$

$\lim_{x \rightarrow 0} \frac{\sin ax}{ax} = 1$, where a is a constant (#)

Examples:

1. $\lim_{x \rightarrow 0} \frac{\sin 4x}{x}$

$$= \lim_{x \rightarrow 0} \frac{4 \cdot \sin 4x}{4 \cdot x}$$

$$= \lim_{x \rightarrow 0} 4 \cdot \frac{\sin 4x}{4x}$$

$$= 4 \cdot 1 = \boxed{4}$$

missing 4 by x ...
multiply by $\frac{4}{4}$...

now becomes 1

3. $\lim_{x \rightarrow 0} \frac{3x + \sin x}{x}$

$$= \lim_{x \rightarrow 0} \left(\frac{3x}{x} + \frac{\sin x}{x} \right)$$

$$= \lim_{x \rightarrow 0} \frac{3x}{x} + \lim_{x \rightarrow 0} \frac{\sin x}{x}$$

$$= \lim_{x \rightarrow 0} 3 + \lim_{x \rightarrow 0} \frac{\sin x}{x}$$

extra term, $3x$
split the fraction
ex: $\frac{3+4}{5} \Rightarrow \frac{3}{5} + \frac{4}{5}$

no place
to put
zero for
 x

$$= 3 + 1$$

$$= \boxed{4}$$

2. $\lim_{x \rightarrow 0} \frac{\sin 3x}{2x}$

$$= \lim_{x \rightarrow 0} \frac{3 \cdot \sin 3x}{2 \cdot 3 \cdot x}$$

$$= \lim_{x \rightarrow 0} \frac{3}{2} \cdot \frac{\sin 3x}{3x}$$

$$= \frac{3}{2} \cdot 1 = \boxed{\frac{3}{2}}$$

missing 3, extra 2 ...

multiply by $\frac{3/3}{3/3}$

now becomes 1

4. $\lim_{x \rightarrow 0} \frac{\sin^2 x}{x^3 - 2x^2}$

$$= \lim_{x \rightarrow 0} \frac{(\sin x)(\sin x)}{x^2(x-2)}$$

$$= \lim_{x \rightarrow 0} \frac{\sin x}{x} \cdot \frac{\sin x}{x} \cdot \frac{1}{x-2}$$

$$= \left(\lim_{x \rightarrow 0} \frac{\sin x}{x} \right) \left(\lim_{x \rightarrow 0} \frac{\sin x}{x} \right) \left(\lim_{x \rightarrow 0} \frac{1}{x-2} \right)$$

$$= 1 \cdot 1 \cdot \frac{1}{0-2} = \boxed{-\frac{1}{2}}$$

what a mess...
can't split a denominator

factor ...
