

# Horizontal Asymptotes

1. Find the horizontal asymptote

$$f(x) = \frac{5x^3 + 27}{20x^2 + 10x + 9}$$

Degree Num > Degree Denom

So, no HA

2. Find the horizontal asymptote

$$f(x) = \frac{4 - x^2}{4x^2 - x - 2}$$

Degree Num = Degree Denom  
So, HA @  $y =$  leading coefficients

$$- \frac{1}{4}$$

3. Find the horizontal asymptote

$$f(x) = \frac{5x^3 + 27}{20x^4 + 10x + 9}$$

Degree Num < Degree Denom

So, HA @ y = 0

4. Find the horizontal asymptote

$$f(x) = \frac{2x^6 + 6x^3}{4x^5 + 3x^3}$$

Degree Num > Degree Denom  
So, no HA

5. Find the horizontal asymptote

$$f(x) = \frac{5x^2 + 27}{20x^2 + 10x^3 + 9}$$

Degree Num < Degree Denom

So, HA @ y = 0

6. Find the horizontal asymptote

$$f(x) = \frac{x - 5}{x^2 - 25}$$

Degree Num < Degree Denom

So, HA @ y = 0

7. Find the horizontal asymptote

$$f(x) = \frac{2x + 1}{1 - 2x}$$

Degree Num = Degree Denom  
So, HA @ y = leading coefficients

$$\boxed{-1}$$

8. Find the horizontal asymptote

$$f(x) = \frac{2x^2 + 1}{1 - 2x}$$

Degree Num > Degree Denom

So, no HA

9. Find the horizontal asymptote

$$f(x) = \frac{\sqrt{x^2 - 14}}{2x - 3}$$

Degree Num = Degree Denom  
So, HA @  $y = \text{leading coefficients}$

$\frac{1}{2}$

10. Find the horizontal asymptote

$$f(x) = \frac{\sqrt{x^2 + 5}}{2x^2 + x - 3}$$

Degree Num < Degree Denom

So, HA @ y = 0

**SWAT**
