

**3.2 Exponential & Logistic Modeling**

Target 3F: Model real world situations and use regressions with the use of functions

*Review of Prior Concepts*

The population ( $P$ ) of a city can be represented in an equation  $P = 3000e^{kt}$ , where  $t = 0$  represents the year 1900. In 1850, the population was 1100. Find the value of  $k$  and use this value of  $k$  to estimate the population in the year 2012.

**More Practice****Population Modeling**<http://www.coolmath.com/algebra/17-exponentials-logarithms/06-population-exponential-growth-01><http://www.purplemath.com/modules/expoprob2.htm><https://www.youtube.com/watch?v=63udRYh04sY>**SAT Connection****Passport to Advanced Mathematics****1.** Create a quadratic or exponential function or equation that models a context.

**Example:** A radioactive substance decays at an annual rate of 13 percent. If the initial amount of the substance is 325 grams, which of the following functions  $f$  models the remaining amount of the substance, in grams,  $t$  years later?

A)  $f(t) = 325(0.87)^t$

B)  $f(t) = 325(0.13)^t$

C)  $f(t) = 0.87(325)^t$

D)  $f(t) = 0.13(325)^t$

[Solution](#)

Logistic Model

$$f(x) = \frac{c}{1 + a \cdot b^x}$$

**Homework Assignment**

p.271 #23,28,45,47,50

**SAT Connection****Solution**

**Choice A is correct.** Each year, the amount of the radioactive substance is reduced by 13 percent from the prior year's amount; that is, each year, 87 percent of the previous year's amount remains. Since the initial amount of the radioactive substance was 325 grams, after 1 year,  $325(0.87)$  grams remains; after 2 years  $325(0.87)(0.87) = 325(0.87)^2$  grams remains; and after  $t$  years,  $325(0.87)^t$  grams remains. Therefore, the function  $f(t) = 325(0.87)^t$  models the remaining amount of the substance, in grams, after  $t$  years.

Choice B is incorrect and may result from confusing the amount of the substance remaining with the decay rate. Choices C and D are incorrect and may result from confusing the original amount of the substance and the decay rate.
