

**Unit 10 (Chapter 6): Parametric & Polar****6.3 Parametric Equations**

Target 10A: Define and graph parametric equations

Target 10B: Perform parametric/rectangular conversions

Think about this: Imagine a baseball is thrown across a field. What are the variables involved?

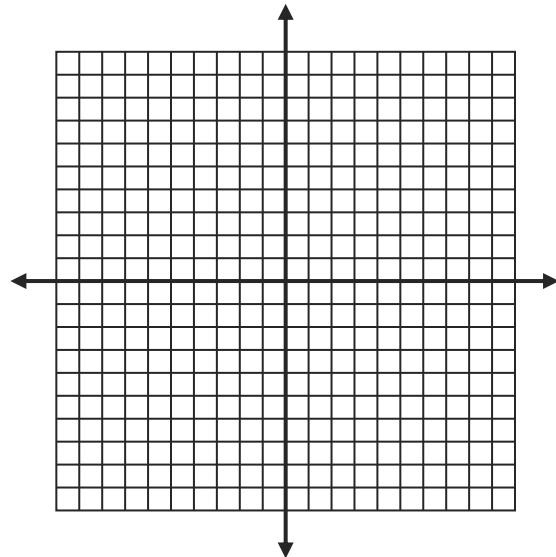

**Parametric Equations**

- $x(t) \rightarrow$  horizontal distance in terms of time
- $y(t) \rightarrow$  vertical distance in terms of time

**Graphing Parametric Equations**Construct a table choosing values of  $t$  and then determine the values of  $x$  and  $y$ .*Example 1:* Make a table of values and sketch the curve, indicating the direction of your graph.

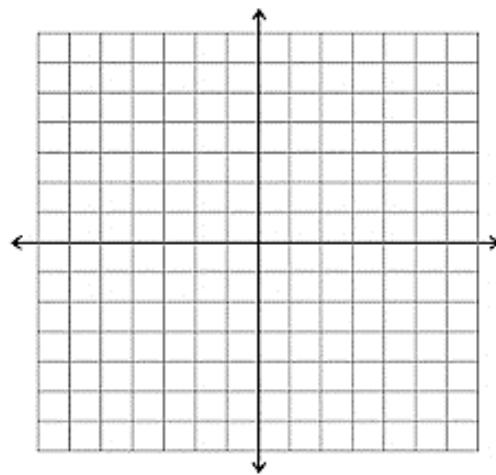

$$x(t) = t^2 - 2, y(t) = 3t$$

$t$	$x$	$y$
-3		
-2		
-1		
0		
1		
2		
3		

*Example 2:* Make a table of values and sketch the curve, indicating the direction of your graph.

$$\begin{aligned} x(t) &= 5 - 3t, \\ y(t) &= 2 + t, \end{aligned} \quad -1 \leq t \leq 3$$

$t$	$x$	$y$

*Example 3:* Using your graphing calculator, graph the parametric equations:

$$x(t) = 4t^3 - 16t^2 + 15t, \quad y(t) = 2$$

$$0 \leq t \leq 5, \quad t\text{step} = 0.05$$

Window:  $X[-4,6], Y[-3,6], Xscale: 1, Yscale: 1$ 

When and where does the particle reverse direction?

### Converting from Parametric to Rectangular

Determining a Rectangular Equation for Given Parametric Equations

- Solve either equation for  $t$ .
- Substitute that value of  $t$  into the other equation.
- Calculate the restrictions on the variables  $x$  and  $y$  based on the restrictions on  $t$ .

*Example:* Write the parametric equations in rectangular form.

$$x(t) = \sqrt{t - 2}, \quad y(t) = 3t$$

*Solution:*

*Steps:*

$$x = \sqrt{t - 2}$$

Write one of the parametric equations and then solve for  $t$ .

$$x^2 = t - 2$$

$$x^2 + 2 = t$$

$$y = 3t$$

Write the other parametric equation.

$$y = 3(x^2 + 2)$$

Substitute in expression for  $t$ .

$$y = 3x^2 + 6$$

Simplify.

Restriction on  $t$ :

Since  $x(t) = \sqrt{t - 2}$  & can't  $\sqrt{ }$  a negative #,  $t - 2$  needs to be  $\geq$  zero.

$$\therefore t - 2 \geq 0, \text{ so } t \geq 2$$

If  $t \geq 2$ , then  $x \geq 0$  and  $y \geq 6$

*ANSWER:*

$$y = 3x^2 + 6, \text{ where } x \geq 0 \text{ and } y \geq 6$$

Now you try, write the parametric equations in rectangular form.

1.  $x(t) = \frac{1}{2}t + 4, \quad y(t) = t^3$

2.  $x(t) = 5 - 3t, \quad y(t) = 2 + t, \quad -1 \leq t \leq 3$

3.  $x(t) = \frac{1}{t-3}, \quad y(t) = 4t + 5$
