

P.6 Complex Numbers

Target 2B: Find Real and Complex Zeroes of Polynomials by Synthetic and Long Division

Review of Prior Concepts

Without a graphing calculator, find the zeroes of $f(x) = x^3 - x^2 - x - 2$. Identify if the zeroes are rational or irrational.

More Practice

Rational Zeroes Theorem

SAT Connection

Passport to Advanced Math

4. Create an equivalent form of an algebraic expression

Example: For $i = \sqrt{-1}$, what is the sum $(7 + 3i) + (-8 + 9i)$?

- A) $-1 + 12i$
- B) $-1 - 6i$
- C) $15 + 12i$
- D) $15 - 6i$

Solution

Standard Form of Complex Numbers

Fill in the key ideas from the definition

$a + bi$,
 where a and b are _____
 and $i =$ _____

Label the complex plane

<https://www.mathsisfun.com/numbers/complex-numbers.html>

Examples:

Simplify and graph the solution.

1) $(2 + i) - (7 - 3i)$

2) $(4 + i)(3 - 2i)$

3) $(2 + i)^3$

Complex Conjugates and Division

Vocabulary Term	In my own words...	Examples
Complex Conjugate		

Examples:

Write the complex number in standard form.

1) $\frac{3}{4-i}$

2) $\frac{2+5i}{3+i}$

Complex Solutions of Quadratic Equations

When solving a quadratic equation, the discriminant (_____) tells whether the solutions are real or imaginary.

Discriminant	Symbolically	# & type of solutions
Positive		
Zero		
Negative		

Examples:

Solve the quadratic equation.

1) $x^2 + x + 11 = 5x - 8$

2) $3x^2 + x + 2 = 0$

Homework Assignment

p.52 #1,7,9,17,20,33,41,43, p.511#1

SAT Connection**Solution**

Choice A is correct. To calculate $(7 + 3i) + (-8 + 9i)$, add the real parts of each complex number, $7 + (-8) = -1$, and then add the imaginary parts, $3i + 9i = 12i$. The result is $-1 + 12i$.

Choices B, C, and D are incorrect and likely result from common errors that arise when adding complex numbers. For example, choice B is the result of adding $3i$ and $-9i$, and choice C is the result of adding 7 and 8.
