

LINER/QUADRATIC/EXPONENTIAL TABLES

HOW TO RECOGNIZE THE TYPE OF GRAPH FROM A TABLE

To recognize if a function is linear, quadratic (a parabola), or exponential without an equation or graph, look at the differences of the y -values between successive integral x -values. If the difference is constant, the graph is linear. If the difference is not constant but the second set of differences are constant, the graph is quadratic. If the differences follow a pattern similar to the y -values, the graph is exponential. See the examples below for clarity.

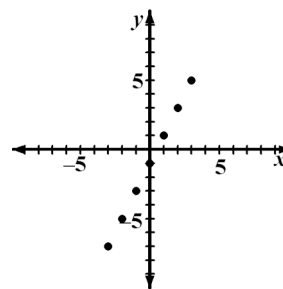

Examples

Based on each table, identify the shape of the graph.

Example 1

x	-3	-2	-1	0	1	2	3
y	-7	-5	-3	-1	1	3	5

2 2 2 2 2 2

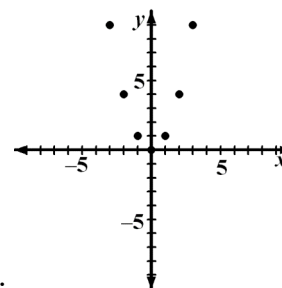

The difference in y -values is always two, a constant. The graph is linear and is verified at right.

Example 2

x	-3	-2	-1	0	1	2	3
y	9	4	1	0	1	4	9

-5 -3 -1 1 3 5
2 2 2 2 2

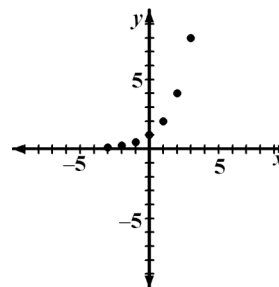

The first difference in y -values is not constant but the second difference is. The graph is quadratic and is verified at right.

Example 3

x	-3	-2	-1	0	1	2	3
y	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	1	2	4	8

$\frac{1}{8}$ $\frac{1}{4}$ $\frac{1}{2}$ 1 2 4

The difference in y -values follows a pattern similar to the y -values. The graph is exponential and is verified at right. (In this case, the difference pattern was exactly the same as the y -values. This is not always necessary.)

Problems

Based on the difference in y-values, identify the graph as linear, quadratic, exponential, or neither.

1.

x	-3	-2	-1	0	1	2	3
y	14	10	6	2	-2	-6	-10

2.

x	-3	-2	-1	0	1	2	3
y	$\frac{1}{2}$	1	2	4	8	16	32

3.
